

Day 20 - Portals Integration & Dry Run

College-Value Dashboard

PlaceMux Phase 2 | Data Analyst | Task 20 | Week 5

TASK FOCUS

Ship the college-value dashboard.

DEFINITION OF DONE

College-value dashboard live.

This report documents the completed dashboard implementation, calculated evidence, data model, validation results and actual rendered dashboard views. It intentionally does not include the written submission answer.

1. Executive Metrics

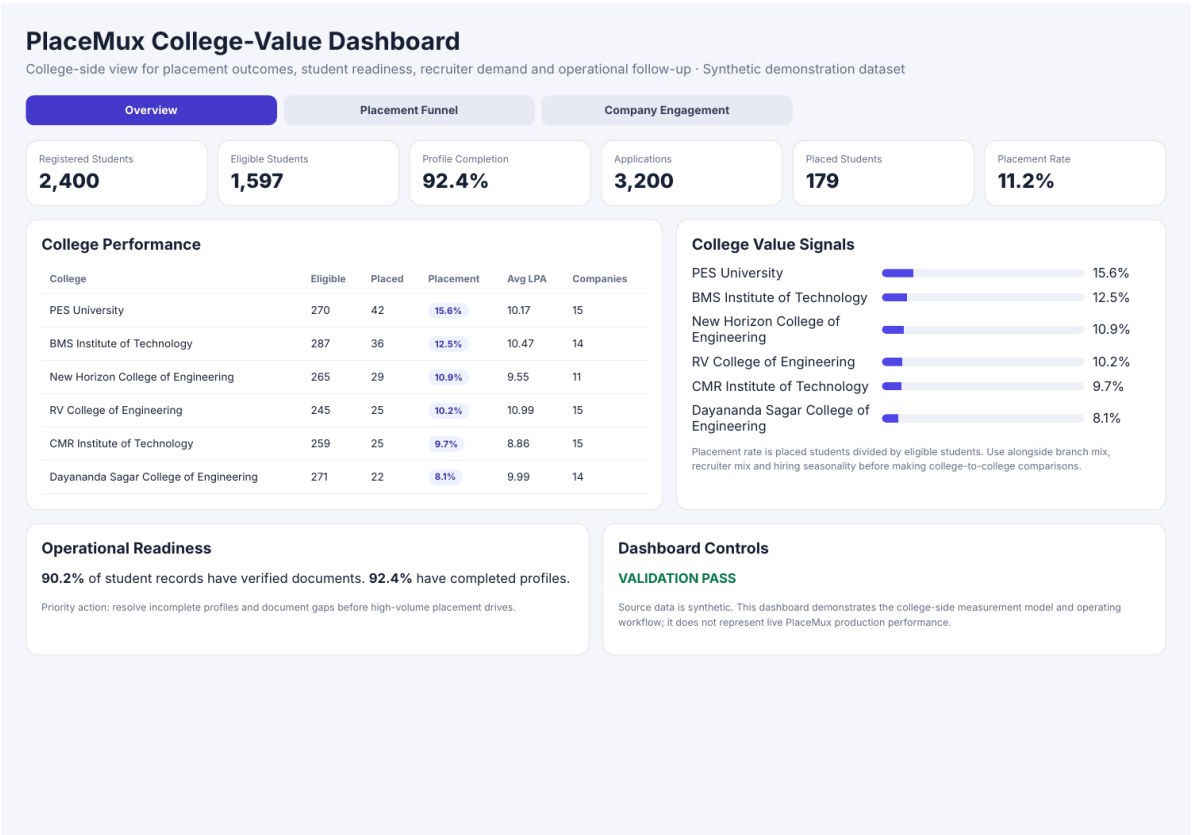

Metric	Result	Definition / Use
Registered Students	2,400	Student records in reporting population
Eligible Students	1,597	Eligibility based on CGPA, backlogs, profile completion and verification
Profile Completion Rate	92.4%	Completed profiles / registered students
Applications	3,200	Application records generated for eligible students
Students Placed	179	Distinct students at Placed stage
Placement Rate	11.2%	Distinct placed students / eligible students
Average Package	10.04 LPA	Mean package among placed students with a package value
Median Package	9.90 LPA	Median package among placed students with a package value
Active Companies	15	Distinct companies represented in college engagement data
Drive Events	220	Recorded company engagement events

2. College-Level Result Table

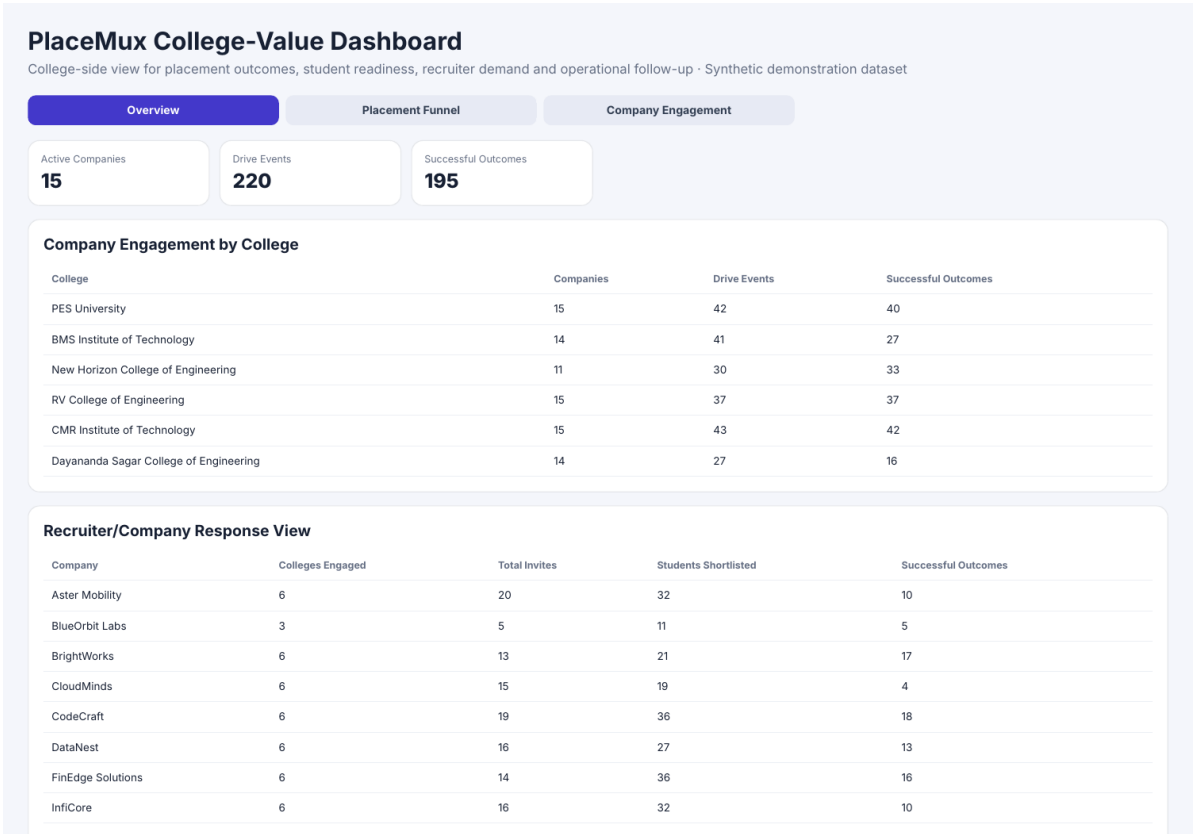

College	Eligible	Placed	Placement	Avg LPA	Companies
PES University	270	42	15.6%	10.17	15
BMS Institute of Technology	287	36	12.5%	10.47	14
New Horizon College of Engineering	265	29	10.9%	9.55	11
RV College of Engineering	245	25	10.2%	10.99	15
CMR Institute of Technology	259	25	9.7%	8.86	15
Dayananda Sagar College of Engineering	271	22	8.1%	9.99	14

3. Dashboard Evidence - Overview

Actual rendered view of the completed college-value dashboard. The Overview page combines readiness, applications, placement outcomes, college comparison and validation.

5. Dashboard Evidence - Company Engagement

6. Data Model & Reproducibility

Logical entities: College, Student, Application and Company Engagement. Stable identifiers are college_id, student_id and application_id.

College KPIs are calculated at the correct analytical grain: student readiness metrics use student records, placement rate uses distinct placed students divided by eligible students, and package metrics use placed records with a package value.

The dashboard is generated from phase2/college_dashboard_demo.py. The script produces synthetic source data, college KPI output, machine-readable validation evidence and the self-contained HTML dashboard.

All data is explicitly synthetic demonstration data. No production PlaceMux performance is claimed.

Validation Check	Result
Duplicate Student Ids	0
Missing Student College Ids	0
Ineligible Applications	0
Duplicate Application Ids	0
Missing Application Student Ids	0
Invalid Application Stages	0
Placed Without Package	0
Negative Packages	0
College Kpi Rows	6
Overall Status	PASS

7. Completion Status

Requirement	Status
College-value dashboard built and demonstrated	Complete
Dashboard available as self-contained local HTML	Complete
Source script and reproducible outputs retained	Complete
Validation completed	PASS
